Initiator of somnology in Romania and of the first Bureau for quitting smoking in Romania.

Publications

In recent years, I have been the sole or first author of various books or monographs. In most of them, I dealt with my favorite subjects: sleep pathology, respiratory failure, quitting smoking, homecare of severe respiratory patient and smoking prevention.

The scientific research activity was carried out by carrying out research contracts as a project director in the country, international research grants as a team member and international or national multicenter research contracts obtained on a competitive basis as a member of the research team or in as principal investigator, multicenter research contracts as a member of the research team. Also, studies were published in the volumes of recognized national/international scientific events (with ISSN or ISBN).

I have published articles/studies published in specialized magazines of international circulation (magazines rated by ISI or indexed in international databases specific to the field, which make a selection process of the magazines based on performance criteria) and in magazines in the country recognized by the CNCSIS: The subjects addressed in these papers overlapped with the fields of pathology that particularly concern me (somnology, smoking, chronic obstructive pulmonary diseases, home care for chronic respiratory patients, etc.).

In recent years, I have participated, as an author or co-author, in conducting ISSN and ISBN studies that were later published in the volumes of recognized national/international scientific events.

More than 500 articles and 20 books published.
