Summary

I am a specialist in General Pediatrics, trained and practicing at the **Emergency Clinical Hospital for Children "Louis Turcanu" in Timisoara.**

Throughout my residency and post-specialization years, I have been actively involved both in the care of children with acute conditions and in the long-term follow-up of patients with chronic diseases. I have completed numerous on-call shifts in the hospital departments, where I learned the importance of rapid clinical decision-making, teamwork, and empathetic communication with parents.

I strongly believe that medicine is not only about treatment, but also about accompanying the child and their family on the path to recovery, with respect and genuine care.
